Reviewer's report

Title: Chest pain in primary care: Is the localization of pain diagnostically helpful in the critical evaluation of patients? - a cross sectional study

Version: 2 Date: 3 August 2013

Reviewer: Valerio Zacà

Reviewer's report:

Interesting paper assessing the value of one of the features, namely localization, of chest pain in the differential diagnosis of aetiologies of the symptom. Overall the paper is well written, the data is obtained from a large patient population, and the study design is appropriate. Results are nicely reported and discussed.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
