Reviewer's report

Title: Feasibility of a GP delivered skin cancer prevention intervention in Australia

Version: 1 Date: 10 March 2014

Reviewer: Anthony Reeder

Reviewer’s report:

This is a useful preliminary study of feasibility and acceptability, although not statistically powered to identify other than a major effect.

Minor essential revisions

1.

Page 9: It is stated that sun exposure was measured by self-report of the "hours spent outdoors", but there is no indication of the recall period and whether or not seasonal factors were considered.

Discretionary revisions

1.

Page 5: it would help if the authors indicated whether the Leichhardt scores reported were relatively high or low for the state / country.

2. Page 7: It would help if the authors briefly described what was the "usual GP care" in these circumstances.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
