Reviewer's report

Title: Examining the efficacy of a support algorithm for commencing patients with type 2 diabetes on a basal / prandial insulin regimen in the primary care setting with retrospective continuous glucose monitoring as an adjunct: INITIATION STUDY PROTOCOL

Version: 3 Date: 26 November 2013

Reviewer: Andrea E Scaramuzza

Reviewer's report:

Major compulsory revisions
It is opinion of this reviewer that the paper needs to be shortened widely since it deals with a topic well known by specific audience and no original results are presented.

Introduction needs to be aimed at the paper topic avoiding redundant and well known information.

The idea to use rt-CGM to titrate insulin is original and interesting, however no original data are presented here

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
