Reviewer: Vernon Weh-Hau Lin

Level of interest: A paper of considerable general medical or scientific interest

Advice on publication: Accept without revision

The authors have done an outstanding job in describing a complicated MRSA infection involving the scrotum. The abstract, background and the case presentation is appropriate and clear. Discussion is nicely done with a good beginning with impaired immune responses in SCI. The management of this case was also appropriate and acceptable in both SCI and medical communities. I would recommend acceptance of this manuscript.
