Reviewer's report

Title: Family doctors’ problems and motivating factors in management of depression

Version: 4 Date: 4 July 2006

Reviewer: Daniel W O'Connor

Reviewer's report:

General

---------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

The authors have certainly attended to the reviewers' comments but I regret that I am still not convinced that the paper is of sufficient breadth or sophistication to warrant publication in this journal. If I remember correctly, this second version is not as well written as the first one and, if it is accepted for publication, it will require substantial editing.

---------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

---------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Reject because too small an advance to publish

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: No
