Reviewer’s report

Title: The Frequency of Missed Test Results and Associated Treatment Delays in a Highly Computerized Health System

Version: 3 Date: 25 April 2007

Reviewer: Wilson Pace

Reviewer’s report:

General
The authors have addressed the primary concerns as their data allow and I believe the manuscript offers needed information on the necessity of EHR vendors to consider safety issues within their work processes.

-------------------------------------------------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)
All compulsory revisions have been attended to.

-------------------------------------------------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)
No issues

-------------------------------------------------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)
No issues

Minor editing needed in the newly inserted text.

What next?: Accept after minor essential revisions

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
