Reviewer's report

Title: Inflammatory myoglandular polyp of the cecum: case report and review of literature

Version: 2 Date: 4 December 2009

Reviewer: Shoji Hirasaki

Reviewer's report:

I think the authors have responded to my comments and questions. I would however recommend linguistic revision by someone native to the English language.

There are some mistakes in this manuscript, for example, in Discussion, third paragraph, peduncolated (88.3%)# pedunculated (88.3%). In Discussion, fourth paragraph, “As their experience is limited to 10 patients more cases are required”#“As their experience is limited to 10 patients, more cases should be studied”.

In Discussion, fifth paragraph, authors described that “Juvenile polyps do not show###in young age.” and “Inflammatory fibroid polyp (IFP) mostly occur ###plasma cells and eosinophils.” But juvenile polyps occur in middle or old age. Authors should describe about endoscopic characteristics of colonic IFP and juvenile polyps. It is difficult to distinguish juvenile polyps from IMGPs by endoscopic findings. Also, it is difficult to distinguish red colonic IFPs from IMGPs by endoscopic findings. Refer this paper (Hirasaki S, et al. Inflammatory fibroid polyp occurring in the transverse colon diagnosed by endoscopic biopsy. World J Gastroenterol 2007 ;13:3765-6) and add related papers to your References.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
