Refractory obstructive jaundice in a child affected by thalassodrepanocytosis: A new endoscopic approach

I read the revised version of the manuscript. They added the new information about patient's long time prognosis data and primary operation data, which I thought necessary for this manuscript. Also they responded several minor points which I pointed out in the first review.

Due to these improved points, I think this manuscript has enough quality for publishing in BMC gastroenterology and containing important points for people in the gastroenterology field.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
