Reviewer's report

Title: Relationship of 24-hour ambulatory blood pressure and heart rate with markers of hepatic function in cirrhotic patients

Version: 2 Date: 28 June 2010

Reviewer: Luis Olmedilla

Reviewer's report:

- Minor essential revisions:
The authors must add "hemodynamic" in the text in the Discussion: "We hypothesized that because hemodynamic parameters such as low ..... more reliable index of liver dysfunction than the conventional HEMODYNAMIC office assessment" to clarify it, because it is difficult to think that BP or HR measurement can be more reliable index of liver dysfunction than THE CONVENTIONAL ASSESSMENT.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
