Reviewer's report

Title: High prevalence of gastroesophageal reflux esophagitis in Chinese patients with chronic liver diseases

Version: 1  Date: 21 January 2010

Reviewer: Daniel Jaspersen

Reviewer's report:

Major Compulsory Revisions:
Evaluation of Barrett`s esophagus is missing and should be added, if possible.
According to symptoms, the prevalence of NERD in the study patients should be stated.
Which clinical conclusions should be drawn from the study? This should be discussed.

Minor Essential Revisions:
Spelling mistakes: Abstract - Conclusions: "GE was more prevalent..." (instead of "prevalence")
Figure 2: "The relationship..." (instead of "repationship")

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
