Reviewer's report

Title: Colon Capsule Endoscopy compared to Conventional Colonoscopy under routine screening conditions

Version: 3 Date: 9 June 2010

Reviewer: Hans Herfarth

Reviewer's report:

The authors report about the sensitivity of colon capsule endoscopy compared to colonoscopy. The study has some weaknesses: small sample size, no second look in patients with positive capsule findings and negative colonoscopy. However overall the now revised manuscript adds to the growing body that colon capsule endoscopy is not ready for prime time for screening purposes. The authors point this out in their conclusion.

I have only minor changes. Instead of Figure 1 (colon capsule), I would include the two tables of the supplementary material in the manuscript: table 1 summarizing the bowel and table 2 the definitions of the quality of the bowel prep.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
