Reviewer’s report

Title: Rare Gallbladder Adenomyomatosis Presenting as Atypical Cholecystitis: A Case Report

Version: 2 Date: 13 June 2011

Reviewer: Hans Herfarth

Reviewer’s report:

This is an interesting case of a not so commonly seen disorder. The authors should modify the case report as delineated below.

Comments:
The findings during surgery are quite impressive as documented by figure 3. Why were the gall bladder abnormalities not already seen on the ultrasound (as discussed by the authors this is the gold standard for the diagnosis of gallbladder adenomyomatosis) and what was the indication for the gallium scan? The answers to these question should be incorporated in the manuscript.

Figure 4 can be omitted since it does not add significant information to the case.

The manuscript needs to be revised by a native English speaker.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
