Reviewer's report

Title: Hospital-based, prospective, multicentre surveillance to determine the incidence of intussusception in children aged < 15 years in Germany

Version: 1 Date: 21 November 2010

Reviewer: TRABELSI ABDELHALIM

Reviewer's report:

The question posed by authors in this manuscript is how to have an accurate estimation of the incidence of intussusception in children aged <15 years in Germany, this question was very well defined by authors and the methods used were very clearly described, the manuscript adhere to the relevant standards for reporting and data deposition ,
Discussion and conclusion are adequately supported by the data,. 
The title and abstract accurately convey what has been found and the writing is acceptable
I have a very little number of a minor revision to recommend to authors:

Page 8 and 12 specialization and not specialisation
Page 20 figure 3 and not 2
Page 21 fig 4 and not 3

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
