Reviewer's report

Title: Diffuse duodenal nodular lymphoid hyperplasia: A large cohort of patients etiologically related to helicobacter pylori infection.

Version: 5 Date: 18 March 2011

Reviewer: Guido Tytgat

Reviewer's report:

I read the manuscript and advise to accept the paper as it is. Although the subject is largely descriptive, there are original aspects in the study justifying publication. The critiques of reviewer 2 are excessive and are somewhat inappropriate.
