Reviewer's report

**Title:** Is hepatotropic contrast enhanced MR a more effective method in differential diagnosis of hemangioma than multi-phase CT and unenhanced MR?

**Version: 2 Date:** 1 December 2010

**Reviewer:** herve trillaud

**Reviewer's report:**

The authors have revised the paper following my comments. The manuscript is improved and I have no other comment.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
