Reviewer's report

Title: The Association of Serum Lipids with the Histological Pattern of Rectosigmoid Adenoma in Taiwanese Adults

Version: 4 Date: 6 February 2011

Reviewer: Georgia Lazaraki

Reviewer's report:

Comments to the authors:
• In this study the authors try to elucidate the relationship between dyslipidemia and adenoma formation of the left colon. It is a well written manuscript with a meticulous statistical analysis. The authors had sufficiently responded to my comments.
• Discretionary revisions: What is odd to me is that, although the authors provide the stratified data for age and gender regarding adenoma histology and lipids levels in the point-by-point response (according to the other reviewer’s comments), these are not included in the results part of the revised manuscript after all.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
