Reviewer’s report

Title: Giant pedunculated hepatocellular carcinoma with hemangioma mimicking intestinal obstruction: A rare case

Version: 1 Date: 31 May 2011

Reviewer: maolin yan

Reviewer’s report:

The authors do not show the hemangioma and the features of intestinal obstruction in figure1A,B,C, which was the most important characteristics for this case. The order in figure2 should be C#B#A.

It is for these reasons that the reviewer thinks that this case report is not worth publishing in BMC Gastroenterology.
