Title: Oral versus intravenous proton pump inhibitors in preventing re-bleeding for patients with peptic ulcer bleeding after successful endoscopic therapy

Version: 2 Date: 2 April 2012

Reviewer: Nicola de Bortoli

Reviewer’s report:

Dear Author

I interestingly red your paper entitled "Oral versus intravenous proton pump inhibitors in preventing re-bleeding for patients with peptic ulcer bleeding after successful endoscopic therapy".

It could be considered a well designed and written paper. The results are interesting and statistic analysis well performed. In your conclusion is well indicated that these results are interesting but need to be improved in a larger series of patients.

Future study probably need to be improved with intra-gastric pH study in all patients (IV versus oral PPI) and probably using a similar PPI (for example esomeprazole).

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
