Reviewer's report

Title: Comparative analysis of inflamed and non-inflamed colon biopsies reveals strong proteomic inflammation profile in patients with ulcerative colitis

Version: 3 Date: 28 May 2012

Reviewer: Grainne Lennon

Reviewer's report:

Discretionary Revisions
Results section:
Line 216-217 & Figure 2: The authors refer to differences in the grouping of samples from patients 9, 14 & 8. However within the corresponding figure the samples are labelled according to biopsy number rather than patient number. To improve the clarity of this figure, it would benefit from including a note within the figure legend stating the relevant biopsy numbers which correspond to these patients.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
