Reviewer's report

Title: Detection and treatment of an aneurysma spurium of the arteria hepatica dextra after laparoscopic cholecystectomy

Version: 1 Date: 5 April 2013

Reviewer: Michael Rünzi

Reviewer's report:

Major compulsory Revisions:
Interesting case ! However, please explain why patient was not sent to gastroscopy 2nd time he was admitted to the hospital. This would have probably shown signs of blood in the duodenal or jejunal lumina. Further, why didn't capsule endoscopy reveal the source of bleeding ?
In the case presentation section of the ms. the communication of the aneurysm with the small bowel is not stated, please explain and correct. There is only a hint later in the conclusion section.

Minor essential revisions
In the Conclusion section is stated that lap liver resection is a treatment option, the wording should be "partial liver resection"

Discretionary revisions
Obviously the interventional radiologist sealed the case and stopped the bleeding. One should give him credit in an aknowledgement or as co-author.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
