Reviewer's report

Title: Prediction of symptomatic improvement after exposure-based treatment for irritable bowel syndrome.

Version: 1 Date: 27 June 2013

Reviewer: Dennis Ougrin

Reviewer's report:

This article is well written with sound methodology and good English (a few inevitable typos need correcting). Statistical analysis appears appropriate. Discussion is written well and some of the limitations are discussed. However, the article does not significantly contribute to the knowledge in the field. There are few significant findings and it may be that the sample size is the main culprit.

Level of interest: An article of insufficient interest to warrant publication in a scientific/medical journal

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
