Reviewer's report

Title: Intestinal obstruction due to dual gastrointestinal stenosis in infants: diagnosis and management of 3 cases

Version: 2 Date: 16 March 2014

Reviewer: atul malhotra

Reviewer's report:

Minor essential revisions
The authors present an interesting series of intestinal obstructions due to dual stenotic lesions.
Overall, the manuscript is well written but I would encourage the authors to make the following revisions:
The syntax could be improved with the help of a language editor.
Discussion can be improved by reference to more studies related to the topic. It seems light at the moment.
The photographs need to adhere to resolution standards as specified in the instructions to authors. Figure 2 in particular is not clear.

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
