Reviewer’s report

Title: Dietary Guideline Adherence for Gastroesophageal Reflux Disease

Version: 2
Date: 22 June 2014
Reviewer: davide festi

Reviewer’s report:

The study by Kubo et al is clinically important; the manuscript is well written and the results well explained. There is a question regarding the inclusion criteria: the Authors enrolled patients with a physician-assigned GERD diagnosis and the considered symptoms were heartburn and acid regurgitation. It is well known that the clinical picture of GERD may be characterized by typical symptoms (such as heartburn) but also by atypical symptoms (such as non-cardiac toracic pain, etc). Did the Authors enrolled also patients with atypical symptoms?

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
