Reviewer's report

Title: Magnetic resonance enterography in pregnant women with Crohn's disease: case series and literature review

Version: 2 Date: 3 June 2014

Reviewer: Tamás Molnár

Reviewer's report:

Major Compulsory Revision

It is a good study, which prove that MRI with a special safety is a safe and effective imaging modality also during pregnancy. The disadvantage of the study is the retrospective study design and the low patient number,

Minor revision

There are some spelling mistake, like:

264 In conclusion, modified MRE sequencing provided accurate and clinically meaningful result in

Level of interest: An article of importance in its field

Quality of written English: Needs some language corrections before being published

Statistical review: No, the manuscript does not need to be seen by a statistician.
