Reviewer’s report

Title: Dose-dependent effects of lesogaberan on reflux measures in patients with refractory gastroesophageal reflux disease: a randomized, placebo-controlled study

Version: 2
Date: 17 April 2014

Reviewer: Stanislas Bruley des Varannes

Reviewer’s report:

This is a well conducted study addressing an interesting pharmacodynamic question, though the development was discontinued. The paper is well written, the methodology is suitable to the aims of the study and described accurately. Data are presented and discussed clearly. In addition, strengths and limitations of the study are honestly acknowledged. Illustrations are of quality.

I have no major criticism to this study.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
