Reviewer’s report

Title: Barriers impeding serologic screening for celiac disease in clinically high prevalence populations

Version: 4 Date: 20 February 2014

Reviewer: Jeremy Woodward

Reviewer’s report:

This study of individuals from three higher risk categories for Coeliac disease - those with symptoms, those with affected family members and those with autoimmune conditions - demonstrates that there was a lack of knowledge relating to their risk for Coeliac disease and also how and where to be tested. I am happy that my previous concerns have been addressed by the authors in their revision.

Level of interest: An article of limited interest

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
