Reviewer's report

Title: Severe cholestatic jaundice after a single administration of ajmaline; a case report and review of the literature.

Version: 7  Date: 26 February 2014

Reviewer: Guruprasad Aithal

Reviewer's report:

- This case report has a number of important features. 1) Cholestatic jaundice appeared after a single dose 2) History of drug exposure wasn’t available until the patient had liver biopsy which is an important lesson for clinicians 3) it is not in the list of drugs in liver tox website which highlights its underreporting.

- Authors have cited a broad non-specific review as a reference for HLA association with DILI; I suggest that reference 11 is omitted. Instead authors should cite the original articles highlighting HL associations with cholestatic jaundice- Lucena MI et al., Gastroenterology. 2011;141(1):338-47., Donaldson PT et al., J Hepatol. 2010;53(6):1049-53., and Daly AK et al., Nat Genet. 2009;41(7):816-9.
