**Level of interest:** A paper whose findings are important to those with closely related research interests

**Advice on publication:** Accept after discretionary revisions

I think this is a good case report, of a case which is worth reporting. In general it is well written and interesting.

I can think of no specific alterations that are needed, although I would not have included the table of complications of PEG tube insertion as these have been extensively reported elsewhere and I do not feel this adds to the publication as a whole.
