Title: Dieulafoy's lesion of duodenum: a case report

Authors:

Mohammed Ibrarullah (m_ibrarullah@yahoo.co.in)
Dr Gajanan D Wagholikar (drgajanan2002@yahoo.com)

Version: 1 Date: 19 Dec 2002

Reviewer: cemalettin ertekin

Level of interest: A paper of considerable general medical or scientific interest

Advice on publication: Accept after discretionary revisions

1. Are the conclusions drawn adequately supported by the data shown: if not, to mention the effective treatment modality as injection therapy, two cases are not acceptable, it can be only a suggestion

2. Does the work have any serious flaws that should preclude publication? No

3. Are sufficient details provided to allow replication of the work or comparison with related analyses: if not, what is missing?
The treatment modalities should be expressed in more details. For instance, although band ligation plays an important role in endoscopic treatment of upper gi bleedings including Dieulafoy lesions, it is not discussed in this manuscript. References can be updated. Extra gastric location of the lesion can be stressed with examples.

4. Does the manuscript adhere to the relevant standards for reporting and data deposition: if not, in what ways?
Above mentioned data can support the contents of article

5. Do the title and abstract accurately convey what has been found? Yes

6. Is the writing acceptable? Reevaluation is necessary after corrections

a) Discretionary revisions

TREATMENT MODALITIES OF THESE RARE LESIONS SHOULD CERTAINLY CONSIST OF BAND LIGATION. THIS MODALITY SHOULD BE MENTIONED IN THIS ARTICLE. ALSO OTHER EXTRA GASTRIC LESION SITES MIGHT BE UNDERLINED WITH SOME EXAMPLES TO CLARIFY THE IDEA ON THE READERS MIND.
b) Compulsory revisions

REFERENCES SHOULD BE UPDATED
