Version: 2 Date: 10 Mar 2003

Reviewer: Lisbet Sviland

Level of interest: A paper of limited interest

Advice on publication: Accept after discretionary revisions

I have only a few comments to the revised manuscript.

1. On page 3 I would still prefer the authors to state that the incidence of A-GVHD after allogeneic transplantation ranges from 30% to 60% with skin as the most commonly affected organ often accompanied by intestinal and/or liver involvement.

2. On page 10 the authors should remove the sentence "These associations included decreased plasma cells in LP...." as their reference to plasma cells has now been deleted from the paper.
