Title: Jejunal microvilli atrophy and reduced nutrient transport in rats with advanced liver cirrhosis: improvement by Insulin-like Growth Factor I (IGF-I)

Version: 5 Date: 11 May 2004

Reviewer: peter L jansen

Reviewer’s report:

The authors argue in their letter that their current study has been done with a more advanced model of cirrhosis than they used in their previous studies. In that regard there may be some merit in this study. This study confirms the results of earlier studies in a model with less advanced cirrhosis.
