Reviewer's report

Title: Oxytocin and cholecystokinin secretion in women with colectomy.

Version: 2 Date: 12 August 2004

Reviewer: Ad A Masclee

Reviewer's report:

General
The questions I raised have been adequately answered. I would have preferred continuous instead of bolus injections of CCK. I understand that based on a previous study the authors have chosen otherwise. More important, the suggestion on decreased clearance of CCK has been changed. The discussion is now more in line with their findings. The paper deserves publication.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept without revision

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No

Declaration of competing interests: none
