Reviewer's report

Title: Eosinophilic gastroenteritis in a young girl - Long term remission under Montelukast

Version: 2 Date: 5 June 2005

Reviewer: david A schwartz

Reviewer's report:

General
This is a well written and interesting case report that once again demonstrates the use of Montelukast in the treatment of eosinophilic gastroenteritis. Because it highlights the benefit of Montelukast in this setting I would recommend it be accepted. However, the authors must first correct the conclusion. Their conclusion that this is the the 1st example of long term remission of eosinophilic gastroenteritis under Montelukast is incorrect. Our 2001 paper (ref # 19 in this manuscript) reported a similar case with > 20 months followup.

-----------------------------------------------------------------------------------------------

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

The authors must first correct the conclusion. Their conclusion that this is the the 1st example of long term remission of eosinophilic gastroenteritis under Montelukast is incorrect. Our 2001 paper (ref # 19 in this manuscript) reported a similar case with > 20 months followup

-----------------------------------------------------------------------------------------------

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

-----------------------------------------------------------------------------------------------

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after minor essential revisions
