Reviewer's report

Title: Inhibition of the oxytocin receptors delays gastric emptying

Version: 3 Date: 3 February 2006

Reviewer: Ad A Masclee

Reviewer's report:

General
The authors have responded in detail to the comments and questions. There remain concerns about the lack of data between 15 and 90 min. However, to obtain these data a new study has to be performed. I suggest to accept the paper, but 1) to include or refer to plasma oxy data of previous studies and 2) to specifically mention in the discussion that not the process of gastric emptying but just gastric volume at two time points has been obtained. The individual data on GER are illustrative and show large variation.

Major Compulsory Revisions (that the author must respond to before a decision on publication can be reached)

Minor Essential Revisions (such as missing labels on figures, or the wrong use of a term, which the author can be trusted to correct)

Discretionary Revisions (which the author can choose to ignore)

What next?: Accept after discretionary revisions

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No
