Reviewer's report

Title: Influence of Ketotifen, Cromolyn Sodium, and Compound 48/80 on the survival rates after intestinal ischemia reperfusion injury in rats

Version: 3 Date: 29 July 2008

Reviewer: Gervais Tougas

Reviewer's report:

While the study leads to ask a number of questions correctly pointed out by Dr Sukhodnik, these should be included in subsequent studies. The present report is quantitative although to some extend also qualitative. The data are a valid contribution to our understanding of this model and the possible mediators that can be implicated in the response to reperfusion injury. I would publish with minor grammatical changes.
