Reviewer's report

Title: Use of an Electromagnetic Colonoscope to Assess Maneuvers Associated with Cecal Intubation

Version: 2 Date: 4 February 2009

Reviewer: Michael Bretthauer

Reviewer's report:

Abstract: please give actual numbers for endoscope position and use of ETM, rather than "most often" and "less"

Abstract: It would be helpful to include the most important specifics with regard to ETM in the abstract, eg. which ETM was used how often, success rate for the different ETM's.

Results section: Please add a sentence on the use of sedation in the study participants. I assume that all pts' were sedated but none had assisted ventilation? What drug did you use?
