Reviewer's report

Title: A comparison of diagnostic tests for lactose malabsorption - which one is the best?

Version: 2 Date: 19 October 2009

Reviewer: Piero Vernia

Reviewer's report:

the low number of cases, and the inclusion of some patients with organic disease, the authors answered reasonably well to my comments and those of the other reviewer.

Although the overall idea is not new, some part of the paper provide new and interesting data to this area.

The paper may be accepted.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
