Reviewer's report

Title: A novel scoring system for prognostic prediction in d-galactosamine/lipopolysaccharide-induced fulminant hepatic failure BALB/c mice

Version: 1 Date: 21 August 2009

Reviewer: Shosuke Kojo

Reviewer's report:

This is a good try. However authors should compare their score using small molecules with conventional parameters such as ALT, AST, LDH etc. Is their score superior to conventional parameters?
As a minor point, in Materials and methods, what is "10 microL EDTA"?

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
