Title : Determining the Impact of Medical Co-morbidity on Subjective and Objective Cognitive Performance in an Inner City Memory Disorders Clinic: A Retrospective Chart Review

Authors: Corinne E Fischer, Depeng Jiang and Tom A Schweizer

Reviewers Report:

The authors have addressed all of my concerns. I have only one additional suggestions. In the Results section the authors report that 39% of the sample were “demented” and “9% had dementia secondary to some other cause”. Do they mean that 39% had Alzheimer’s dementia? They should clarify this.
