Reviewer’s report

Title: Is the Nintendo Wii Fit really acceptable to older people?: A discrete choice experiment

Version: 3 Date: 8 August 2011

Reviewer: Willaim Young

Reviewer’s report:

I have reservations regarding the lack of explanation or discussion as to why the Wii Fit is less acceptable to older adults. I understand that it is not the aim of the study. However, it should have been an obvious question to include within the objectives in order to inform clinical applications. This is, in my opinion a clear weakness within the study. Nevertheless, I am confident that the findings reported in this article will be of interest to the readers of BMC Geriatrics in their current state, and therefore endorse the view that the current manuscript should be accepted without further revision.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
