Reviewer's report

**Title:** Medication supply to residential aged care facilities using a centralized medication chart to replace prescriptions

**Version:** 1  **Date:** 29 March 2012

**Reviewer:** Gordon Mallarkey

**Reviewer's report:**

The authors provide a clear definition of their study. The methods are clear and well described. The study provides a snapshot of a small group of stakeholders in a particular location (Western Australia). The authors explain the limitations of this small study and provide a balanced analysis and discussion of their results. The manuscript is well written and all elements have been included. The results are worthy of publication as they indicate a move from paper-based prescribing to central medication charts can lead to improved medication supply, and warrants further investigation.

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
