Reviewer's report

Title: Social inhibition as a mediator of neuroticism and depression in the elderly

Version: 2 Date: 2 September 2011

Reviewer: Jeremy Miles

Reviewer's report:

Minor essential revisions:

1. What does VZ mean?
2. There appear to be some negative values for R-squared, e.g. in the abstract and Page 9.
3. I would remove the Durbin Watson test, it's not really relevant for this sort of data (and doesn't demonstrate independence).
4. 2 (or maybe 3) decimal places on a fit statistic is enough.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
