Reviewer's report

Title: How effective are programs at managing transition from hospital to home? A case study of the Australian Transition Care Program

Version: 3 Date: 27 October 2011

Reviewer: Karen Hirschman

Reviewer's report:

Both the detail on the staff used and the additional analyses are appropriate. However, there are now two issues that come up with the addition of the logistic regression data:

Minor Essential Revisions

1) There is no information on how any of the analyses were done. Add either a footnote or a sentence on statistical modeling that was completed (i.e., Bivariate? Multivariate?). The placement I leave to the discretion of the Editor.

2) I request that findings from the logistic regression models have the p-values added to table 1 to explain the significance of the findings.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
