Reviewer's report

Title: Physical activity for people with dementia: a scoping study

Version: 1 Date: 7 October 2013

Reviewer: Jonathan Waite

Reviewer's report:

The amendments made to this paper have addressed the issues that I raised in my previous comments on this submission.

The revised abstract gives a good overview of the study

There are two copies of the Figures and Tables (they appear identical)

The revised data supplement is a valuable synopsis of the literature which has been reviewed, although I couldn't get it all to display on the screen of my Ipad (ok on Windows computer).

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

No competing interests
