Version: 3 Date: 12 Sep 2002

Reviewer: Dr JR Mort

Level of interest: A paper of considerable general medical or scientific interest

Advice on publication: Accept after discretionary revisions

The authors have done an excellent job in revising the manuscript in response to the suggestions I provided.

I have only one minor suggestion and I will leave its inclusion totally to the discretion of the authors.

1) While you responded to my comment #8 by indicating that there was a case-by-case comparison of the results from the computer and the manual reviews, this was not added to the text in the methods section (e.g. on page 9). I would suggest adding this since it is a definite strength of the study design.

Again, thank you for the opportunity to review this manuscript.
