Reviewer's report

Title: The impact of single versus mixed schistosome species infections on liver, spleen and bladder morbidity within Malian children pre- and post-praziquantel treatment

Version: 3 Date: 22 June 2010

Reviewer: Takafira Mduluza

Reviewer's report:

Minor Essential Revisions

1. - Change the signs >= (greater than and equals signs to combined single symbol) to # in all Tables or where appropriate. Example in the statement below:
e.g. The risk of having splenomegaly as assessed once by MCL#2cm and then by MAL#2 cm did not depend on the presence, or intensity of single or mixed S. mansoni infection but it was slightly reduced in the presence of single S.haematobium infection.

2. The Figure title should be outside the graph and given at the foot.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
