Reviewer's report

Title: Probiotics in the treatment of acute rotavirus diarrhoea. Is better a single species product or multiple species product?: A randomized, double-blind, controlled trial using two different probiotic preparations in Bolivian children.

Version: 2 Date: 12 February 2010

Reviewer: Vassiliki Papaevangelou

Reviewer's report:

This is a well documented interesting article. The methods, results and discussion are nicely presented and Tables are appropriate.

My only comment is that substantial editing is needed by a native English speaking scientist since there are multiple syntax and grammar errors. Also in Page 2, line 8: I would add Bolivia after the town name Cochabamba.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
