Reviewer's report

Title: Survey of HBsAg-positive pregnant women and their infants regarding measures to prevent maternal-infantile transmission

Version: 3 Date: 6 October 2009

Reviewer: Lu-Yu Hwang

Reviewer's report:

The authors have made substantial revision. Now the manuscript simply compared two groups of high-risk infants born to hepatitis B carrier mothers in the hepatitis B maternal-infant transmission prevention program in Wuhan, China. A descriptive study compared the maternal and infant characteristics among two groups of high-risk mothers. The description is clear and focus, and the information is interesting and informative.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
