Reviewer's report

Title: Rv1985c, a promising novel antigen for diagnosis of tuberculosis infection from BCG vaccinated controls

Version: 2 Date: 12 July 2010

Reviewer: SANG NAE CHO

Reviewer's report:

Minor comments:
Table 2 shows 95% CI for the TB patients and HC control groups, but not for the LTBI group. Unless there is any particular reason not to include it for the LTBI group, it would be better to add the information.

Table 3: needs lines in the column description, like in the Table 2.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:
I declare that I have no competing interests.
