Reviewer's report

Title: Serial Interferon-gamma Release Assays during Treatment of Active Tuberculosis in Young Adults

Version: 2 Date: 31 August 2010

Reviewer: Hazel Dockrell

Reviewer's report:

The revised manuscript is now improved.

I suggest that in the Abstract on page 2, Conclusions line 2, the text would read better if reworded to "The reversion to negativity...."

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.

Declaration of competing interests:

I have no financial competing interests.

I have involved in a study based in South Korea, that was investigating interferon gamma release assays in healthy military personnel, but have had no involvement in the work reported in this paper.
